

# Green sponge fingers

*Codium fragile*

## MORPHOLOGY

Dark green in colour. Erect finger-like fronds, growing up to 40 cm long, branching repeatedly into two equal parts.

## WHERE AND WHEN TO FIND IT

Sheltered areas (also rock pools), low intertidal to high subtidal. Abundant in Spring and Summer.

## POSSIBLE MISIDENTIFICATIONS

*Codium vermilara*  
Usually smaller, thinner and more bushy. Microscopic ID might be needed.
